## What is ELD?

Electronic logging device (ELD) is an electronic hardware that connects to the engine and together with our certified software fulfills regulations and improves operations.

## What benefits come with the use of ELDs?

### PREVENT VIOLATIONS

Prevent violations by alerting the drivers if they're close to running out of hours.

### ELDS MAKE COMMUNICATING WITH THE HOME OFFICE EASIER

Two-way integrated messaging lets dispatchers send and receive information.

### NO MORE PAPER LOG BOOKS

Eliminates the need for paper log books for truck drivers. All data is recorded electronically.

### REDUCE ERRORS AND IMPROVE ACCURACY

Reduces errors by automating the entry, recording, completion and storage of all required info.

Be ELD compliant with  **In-CabinPlus**<sup>By UTS</sup>

As part of the ELD rule, by December 2017, all qualified drivers must log records of duty status (RODS) electronically. The electronic records must replace all existing paper logbooks used to record compliance with Hours of Service (HOS). By using In-CabinPlus, you're already way ahead of deadline.
